JAVA PROJECT REPORT ON

Online Quiz Examination System with Automated Result Evaluation

Submitted by

Sindhya J

25bcs151

Under the Guidance of

Aravind

Technical Trainer

Technical Department, KG College of Arts and Science

Academic Year: **2025 – 2026**

APRIL 2026

Semester: **II**

DECLARATION

I hereby declare that the project entitled "**Online Quiz Examination System with Automated Result Evaluation"** submitted in partial fulfillment of the requirements for the course **Java programming** is a **record of my original work** carried out under the guidance of **Aravind** , Technical Trainer, Technical Department, KG College of Arts and Science.

I further declare that this project has not been submitted previously, either in part or in full, for the award of any degree, diploma, or other similar title, at this or any other institution.

I have acknowledged all sources of information used in this project wherever applicable.

April 2026

Coimbatore

Sindhya J

CERTIFICATE

This is to certify that the project entitled **"OnlineQuizExaminationSystemwithAutomatedResult Evaluation"** is a **bona fide work** carried of **[Sindhy.J] [I-B] Computerscience],KGCollegeof Arts & Science**, in partial fulfillment of the requirements for the course **[Bsc.Computer science]**

This project has been completed under my supervision and guidance during the academic period **April 2026**.

Place: Coimbatore

Date: 10/04/26

Submitted for the Viva-Voce Examination held on **10/04/26**

Guide:
(Technical Trainer,KGCAS)

Mr.Aravind

Head of the Department
(Techniacl Head,KGM)

Dr.Boopalan

ABSTRACT

The Online Quiz Examination System with Automated Result Evaluation is a Java-based application designed to conduct quizzes digitally and evaluate results automatically. Traditional examination systems involve manual paper-based tests, which are time-consuming, error-prone, and inefficient in result processing.

This system provides a computerized platform where users can attempt quizzes, and the system automatically evaluates their answers and generates results instantly. The application includes features such as question display, answer selection, score calculation, and result generation.

The system is developed using Core Java concepts such as classes, objects, loops, arrays, and conditional statements. It can be implemented as a console-based application or with a graphical interface using Java Swing.

The main objective of the system is to reduce manual effort, improve accuracy, and provide quick evaluation of results.

1. INTRODUCTION

In today's digital world, online systems have become an essential part of education. Traditional examination methods require a lot of manual work, including paper preparation, evaluation, and result processing. These methods are time-consuming and may lead to errors.

The Online Quiz Examination System is designed to overcome these problems by providing an automated platform for conducting exams. It allows users to answer multiple-choice questions and receive instant results. This system helps in improving efficiency, reducing human errors, and saving time. It is especially useful for schools, colleges, and training institutes.

1.1 Objective

The main objectives of this project are:

- To develop an online quiz system using Java
- To automate the evaluation process
- To reduce manual errors in checking answers
- To provide instant results to users
- To create a user-friendly interface
- To demonstrate Core Java concepts

1.2 Overview

The system presents a set of multiple-choice questions to the user. The user selects answers, and the system checks whether the answers are correct or incorrect.

At the end of the quiz, the system calculates the total score and displays the result.

The application works in a simple flow:

- Display questions

- Accept answers
- Evaluate responses
- Display result

1.3 Features

- Multiple-choice question format
- User input for answers
- Automatic result evaluation
- Score calculation
- Instant result display
- Simple and user-friendly interface
- Fast and accurate processing

1. PROGRAM ANALYSIS

Program analysis is an important phase in software development where the problem is studied in detail and the requirements of the system are identified. This stage helps in understanding how the system should work and what features are required to solve the problem efficiently.

The analysis phase focuses on identifying the current issues in the existing system and proposing a computerized solution that improves efficiency and accuracy.

2.1 Problem Definition

Traditional exam systems face several issues:

- Manual correction takes time
- Chances of human error in evaluation
- Delay in result declaration
- Paper wastage
- Difficulty in managing large number of students

Hence, there is a need for an automated system that can conduct exams and evaluate results efficiently.

2.2 Project Overview

The Online Quiz System is a Java-based application where:

- Questions are stored in the program
- Users answer questions one by one
- The system checks answers automatically
- Marks are calculated instantly

2.3 Scopes and Limitations

Scope

- Can be used in schools and colleges
- Useful for online tests and practice exams
- Can be extended with database and GUI

Limitations

- Limited number of questions (in basic version)
- No database storage (in simple version)
- Requires user interaction

2.SYSTEM DESIGN

System design is the stage where the structure and components of the system are planned before the actual implementation. In this phase, the system is divided into different modules, and the workflow of the application is defined. Proper system design helps in organizing the program efficiently and makes development easier.

The main modules of the**Online Quiz Examination System with Automated Result Evaluation** are explained below:

.1. Question Module

- Stores questions and options
- Displays questions to the user

2. Answer Input Module

- Accepts user answers
- Stores selected options

3. Evaluation Module

- compares user answers with correct answer
- calculates

4.Result Module

- Displays final score
- Shows correct/incorrect answers

5. Exit Module

- Ends the program safely

1. METHODOLOGY

Methodology describes the process followed to develop the project. It explains the steps taken from understanding the problem to designing, implementing, testing, and documenting the system.

4.1 Problem Analysis

- Identify issues in manual exam system
- Define system requirements

4.2 System Design

- Divide system into modules
- Plan program structure

4.3 Program Development

- Implement using Java
- Use arrays, loops, and conditions

4.4 Testing and Validation

- Test with different inputs
- Ensure correct score calculation

4.5 Result and Documentation

- Display results
- Document project details

4.6 Algorithm

1. Start the program
2. Initialize score = 0
3. Display question
4. Accept user answer
5. Check if answer is correct
6. If correct → increase score
7. Repeat for all questions
8. Display final score
9. End program

4.7 Flowchart (Write in diagram form)

Start
↓
Display Question
↓
Accept Answer
↓
Check Answer
↓
Update Score
↓
Repeat
↓
Display Result
↓
End

1. SOURCE CODE

(Example Logic)

```
int score = 0;

if(answer == correctAnswer) {

score++;

}

System.out.println("Your Score: " + score);
```

Input and output screen

Figure 1: Main screen

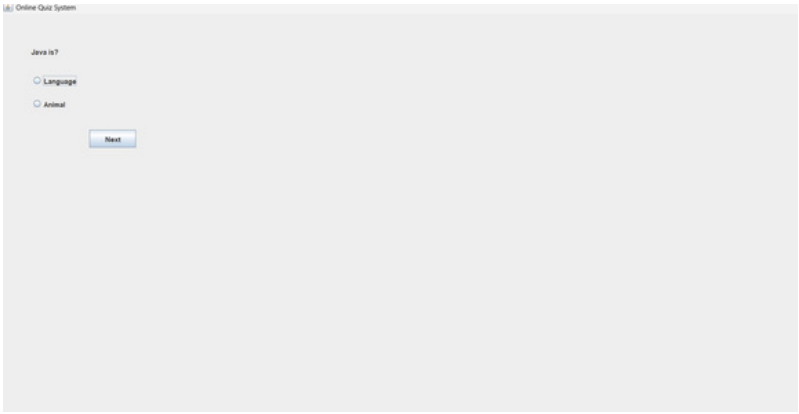

Figure 2: Quiz question

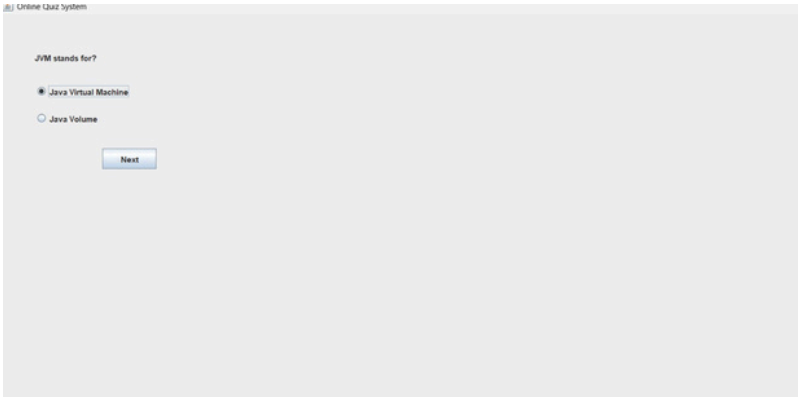

Figure 3: score
